

# SWITCHBACK™

## HDD TOOLING SYSTEM

### FEATURES & BENEFITS

#### MORE UPTIME

Designed for quick and easy tooling changes on the Ditch Witch® AT30, AT32 and AT40 for increased uptime.

#### QUICK TRANSITIONS

The SwitchBack system lets you keep the housing on the drill string when pulling product back. The drill bit can also be replaced with a SwitchBack swivel for even faster transitions.

#### SMALL EXIT PIT

Engineered for simplified tooling changes, this system eliminates the need to remove the housing so a smaller exit pit and less equipment are needed.

#### IMPROVED PRODUCTIVITY

The SwitchBack system makes it possible to drill the pilot bore and expose the tooling with a smaller pit, dramatically improving jobsite productivity.
